MENA-Water MBR sewage treatment plants

MENA-Water MBR sewage treatment plants transform sewage into high quality water up to service water quality so that the effluent can be used as irrigation water for example. The small footprint of the MENA-Water plants enables the systems to be integrated in natural, picturesque surroundings.

The compact package systems developed by MENA WATER FZC are able to filter up to 1000 m³/day in one 40-foot ISO container. The inside tanks are made of stainless steel sheets for a long product life.

For more detailed information, please refer to
