HUBER Solutions for Sedimentation (Settling Tanks and Clarifiers)

Sedimentation processes serve for separation of heavy and floating matter. Primary sludge consists of solids contained in raw sewage and is removed in primary settling tanks, secondary sludge consists of biomass generated during biological treatment and is removed in clarifiers.

We supply a range of HUBER stainless steel products for settling tank equipment, e.g.:

- Inlets and Outlets
- Screens
- Railings, Accesses and Walkways
- Manholes and Pits

Of course, all HUBER products are made of high-grade, corrosion resistant and durable stainless steel; and they are passivated in our factory's pickling bath for optimal surface protection and finishing.
